EDUCATION

University of Auckland - Auckland CBD, Auckland | Expected Graduation **Nov 2027**

- **Degree:** Bachelor's (Hons) of Engineering in Computer Systems Engineering
- **Concentration:** Embedded Systems & Intelligent Software
- **Related Coursework:** Computer Architecture · AI & Machine Learning · Hardware-Software Systems · Software Architecture · Digital Systems Design · Software Quality Assurance · OOP

PROJECTS

“Winnie the Bot” (3rd Place) – ECSE Design Competition | Team Project | 2025

- Built an **interactive robot** featuring face recognition, speech input and output, servo based movements, and ChatGPT powered dialogue, and contributed to hardware and software integration and exhibition materials
- Delivered a functional human-machine interaction prototype integrating face recognition, speech I/O, servo control, and ChatGPT-powered dialogue, earning **3rd place** among competing teams

Sentiment PULSE – AWS | Individual Project | 2026

- Built a **serverless sentiment analysis** pipeline using **Kinesis, Lambda, Comprehend, and DynamoDB** in order to put AWS cloud architecture skills into practice across a real-world, end-to-end project
- Developed a live React dashboard with hand-drawn SVG visualisations and **SAM Infrastructure as Code** in order to apply AWS AI/ML knowledge through a fully deployed **AWS Amplify** application

Web Design – KEB Project Playground | Team Project | 2025

- Developed a **React based website** for the Korean Engineering Body KEB to showcase events and executive members and collaborated with senior students to design UI components using Figma and implement interactive layouts
- Implemented responsive UI components using **JavaScript and React**, and designed interactive layouts in Figma for a production website now used by KEB members

Smart Energy Monitor – Design Project | Team Project | 2025

- Designed an **embedded system** to measure and display energy usage using ATmega microcontrollers and worked on sensor interfacing ADC data handling and signal conditioning
- Produced a validated PCB schematic using **Altium Designer and LTspice** simulations, achieving accurate sensor-to-display signal conditioning across the full hardware stack

RoastWorks Analytics – Python | Team Project | 2026

- Built a Python desktop analytics app (**PyQt6, pandas**) that automated a full-day Excel reporting workflow into under 30 seconds.
- Implemented three time-series **forecasting models** with holdout MAE/RMSE validation and configurable horizons.

EXPERIENCE

Creative Imaginary Lab (ciLab) - Robotics Instructor | Apr 2026 - Present

- Guided students in building and programming robots for practical tasks and competitions

Twelve Restaurant - Front of House (FOH) | Jul 2024 - Jan 2025

- Delivered high quality service while assisting guests and maintaining efficient table transitions

SKILLS

Languages: Java, C, Python, JavaScript

Frameworks & Tools: [React.js](https://react.dev), Git, Maven, JUnit, Figma, Amazon Web Services (AWS)

Hardware & EDA: Atmel AVR, Altium Designer, LTspice, Arduino IDE, Quartus Prime

Other: MATLAB, VHDL, PyQt

LICENSES & CERTIFICATIONS

Amazon Web Services (AWS) Certified Cloud Practitioner | Apr 2026

- Demonstrated proficiency in **AWS core services** (EC2, S3, IAM, Lambda, VPC) and cloud architecture principles including the Well-Architected Framework, security best practices, and cost optimisation

Amazon Web Services (AWS) Certified AI Practitioner | May 2026

- Demonstrated foundational understanding of artificial intelligence, machine learning, and generative AI concepts, including practical application of **AWS AI/ML services** such as Amazon SageMaker, Bedrock, and Rekognition

ACTIVITIES AND LEADERSHIP

Korean Engineering Body (KEB) | Jul 2024 - Present

- **Academic Team Executive** - Organize and lead tutorials for first year engineering students to strengthen KEB's academic support and visibility on campus
- **Mentor** - Support first-year students with academic guidance and social integration into university life
